

# git task sheet

Simon Pfreunschuh

September 8, 2020

## 1 Initializing a repository and adding a remote

- Create an empty folder at a location of your choice
- Navigate to the folder
- Create an empty git repository
- Add `https://github.com/simonpf/ssdp` as a remote
- Pull

## 2 Adding a feature to the repository

- Create and checkout a new branch
- Add your name to the `STUDENT_LIST.MD` file
- Try to push your changes to the remote. Why doesn't it work?

## 3 Creating your personal fork

- Fork the repository `github.com/simonpf/ssdp`
- Add the fork as a remote to your local repository
- Push the changes to your fork

## 4 Make a pull request

- Go to the repository page of your fork
- Make a pull request
- If necessary, merge changes from other students
- Wait for approval
